## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments regarding the nitrogen- or sulfur-containing inhibitor, filed 7/20/2004, with respect to claims 28-31 and 36-42 have been fully considered and are persuasive. The rejections of claims 28-31 and 36-42 under 35 USC 103 have been withdrawn. All rejection under 35 USC 112, 2<sup>nd</sup> paragraph are withdrawn in view of Applicant's amendment.

Regarding claims 32-35 and 43-45, Applicant's arguments regarding the concentration of Wernick are unconvincing because "differences in concentration or temperature will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration or temperature is critical." (MPEP 2144.05.II.A.) No such evidence has been presented. Applicant's arguments regarding pH are unconvincing for substantially the same reason because pH is a measure of the concentration of hydrogen ions.

Applicant's arguments regarding thickness (and other features) of Suzuki in the last paragraph of p. 14 of the response are unconvincing because the claims do not exclude any of the features discussed in that paragraph. Applicant argues that the Zelley teaches the addition of nickel or cobalt in alkaline rather than acidic solution. The argument is unconvincing because Zelley does not teach that the improved adhesion would not be experienced by acidic zincating baths.

### ***Election/Restrictions***

2. Applicant's election of Group II in the reply filed on 7/20/2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Applicant has canceled the claims corresponding to Groups I and III. However, as a result of the addition of new claims 50-72, the following election of species is required:

3. This application contains claims directed to the following patentably distinct species of the claimed invention: different nitrogen- and/or sulfur-containing inhibitors (see, e.g., claims 52-56).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 28-45, 50-51, 57-62, and 68-71 are generic.

Art Unit: 1762

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Cleveland whose telephone number is (571) 272-1418. The examiner can normally be reached on Monday-Thursday, 7-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shrive Beck can be reached on (571) 272-1415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
